

K.E. Rear Control System

The KE Rear Control System; is an amazing world first for camera crane control. This system, offered with all KE Cranes, is designed with the operator in mind. The two handgrips are infinitely adjustable allowing for maximum comfort. The LCD touch screen control unit and the 7" monitor are linked with the control handles so that as the crane moves up and down, you always have a perfect view. This is what happens when the designer of the system is also an operator..... simple stuff really.
